Abstract

Traumatic Dental Injuries in Children

Injuries to children's teeth can be very distressing for children as well as their parents and can lead to significant negative functional, esthetic and psychological effects on children. Dental practitioners have the responsibility to recognize, differentiate, and either appropriately manage or refer children with acute dental and facial trauma.

Learning Objectives

To discuss the following:

- Epidemiology, Examination and diagnostic work up of dental trauma
- Classification of traumatic dental injuries
- Triage and the importance of immediate (emergency) treatment
- The evidence-based treatment options of traumatic dental injuries
- Complications of traumatic dental injuries
