COMMUNICATION

As a Gp-Incharge being a good listener is one of the most important way to communicate with my student, to understand their needs and worries and feel confidence solving it. Setting a value of respecting each other as a staff and students and being open to receive and give feedback tend to create a friendly environment among us.

Communicating, feeling empathy towards patient helps in understanding their concern and comes up with the best treatment plan and fulfil their needs.

LEADERSHIP

Being a role model to my students as their Gp=Incharge teaching them how to work as a team as they must work as pair depending in each other and dividing responsibilities. Lead them to think logically, ethically, and strategically to become a decision taking in consideration patients need and satisfying treatment outcomes.

As a leadership making sure my students achieve the most and learn the most with the respect for time management preparing them to face life after graduating.
